### **Phase II Activation of the Heat Contingency Plan**

Phase II actions of the California Heat Contingency Plan have been activated as of 07/31/17. These actions are taken as a result of the issuance of a Special Weather Statement by the National Weather Service predicting an Excessive Heat Warning for an Operational Area or power outages during warmer-than-normal weather conditions.

- An Excessive Heat Warning remains in effect for much of Northern California through Thursday evening for continuous triple-digit temperatures.
- In addition to the Excessive Heat Warnings, Heat Advisories are in effect for surrounding areas with high temperatures forecast to be hot in the upper 90s to low 100s.
- Overnight temperature recoveries in the 60s and 70s for much of the Central Valley locations.
- There will be potential for increased fire starts due to the hot temperatures.
- Chance for thunderstorms return to Southern California today and tomorrow and will spread north starting Thursday.
- See attached NWS Heat Briefing on the heat event.
- Cal OES has created a page listing Summer Heat Resources including a map of cooling centers around the state, see link below.

# WEATHER SYNOPSIS BY REGION

## **NORTHERN CALIFORNIA**

VERY, VERY HOT Today/Tomorrow, near to record breaking heat

High Risk of Significant Fire Potential when thunderstorm activity increases later this week

High pressure over Northern California will become stronger today and hold the region in its furnace grip for several days yet. The peak of the heat will be in place today and tomorrow with the hottest inland areas 110 to 115 or even a bit hotter in a few places. Thunderstorm activity will be very limited through today, but can't be ruled out entirely along the Cascade/Sierra crest from about Mt. Lassen south and eastward. Firefighter health is a serious issue in this heatwave as it will be more about staying cool along with good hydration. Later tomorrow into Thursday the high with shift position a bit to bring a SE flow with monsoon moisture in it across the region. Isolated thunderstorms will return to the region possibly as early as Wednesday and could form over the Coast Range north of Pt Arena then. Thunderstorm activity will increase Thursday and Friday, although it remains quite uncertain where the best chances for them will be then. It does seem likely they will form in locations much further west than recently, however, and possibly even close to the coast. We may also see active nocturnal thunderstorm activity as well. High Risk for Significant Fire Potential is in place for the mountain areas Thursday and Friday, but there is also some chance that the Sacramento Valley and Bay Area may need to be included. High Risk conditions may continue for some areas into the weekend as well. These conditions will favor new starts, possibly create holdovers and support active burning or even rapid fire spread.

The coastal marine layer in the north remains a bit thinner than usual under a light offshore wind overnight, but daily afternoon sea breezes will continue as will areas of overnight low clouds near the coast.

## **SOUTHERN CALIFORNIA**

Hot through Friday

Scattered thunderstorms this afternoon through Friday afternoon

The easterly flow will continue causing moisture to increase bringing scattered showers and thunderstorms to the mountains and deserts this afternoon through Friday afternoon. Some of the shower and thunderstorm activity will also affect the coastal and valley locations starting across the region this afternoon and across Central California tomorrow afternoon. The strong high pressure over Nevada will also cause temperatures to be 5 to 10 degrees above normal through Friday, with mid 80s to mid 90s across the mountains and mid 90s to 108 in the valleys. Minimum humidity will remain mainly between 12% and 25% away from the coastal areas today. Minimum humidity will increase to above 20% across the region starting today and across Central California starting Wednesday. Winds will be normal through Friday, except there will be strong and erratic winds in and near any thunderstorms. The high pressure will weaken causing temperatures to cool back to near normal this weekend. The shower and thunderstorm activity will decrease this weekend, with only isolated afternoon showers and thunderstorms over the Sierra and over the mountains and deserts of Southern California east of I-15.

# Very High Heat Risk

Tuesday and Wednesday

Issued: July 31, 2017

## What This Means

- Heat like this is rare
- Heat risk is very high, even for the general population
- Little overnight relief
- Long duration heat

### Magenta - Very High Risk

- For the entire population
- Long duration heat
- Little to no relief overnight

### Red - High Risk

For much of the population

### Orange - Moderate Risk

Particularly to those that are:

- Sensitive to heat
- Without effective cooling
- Without adequate hydration

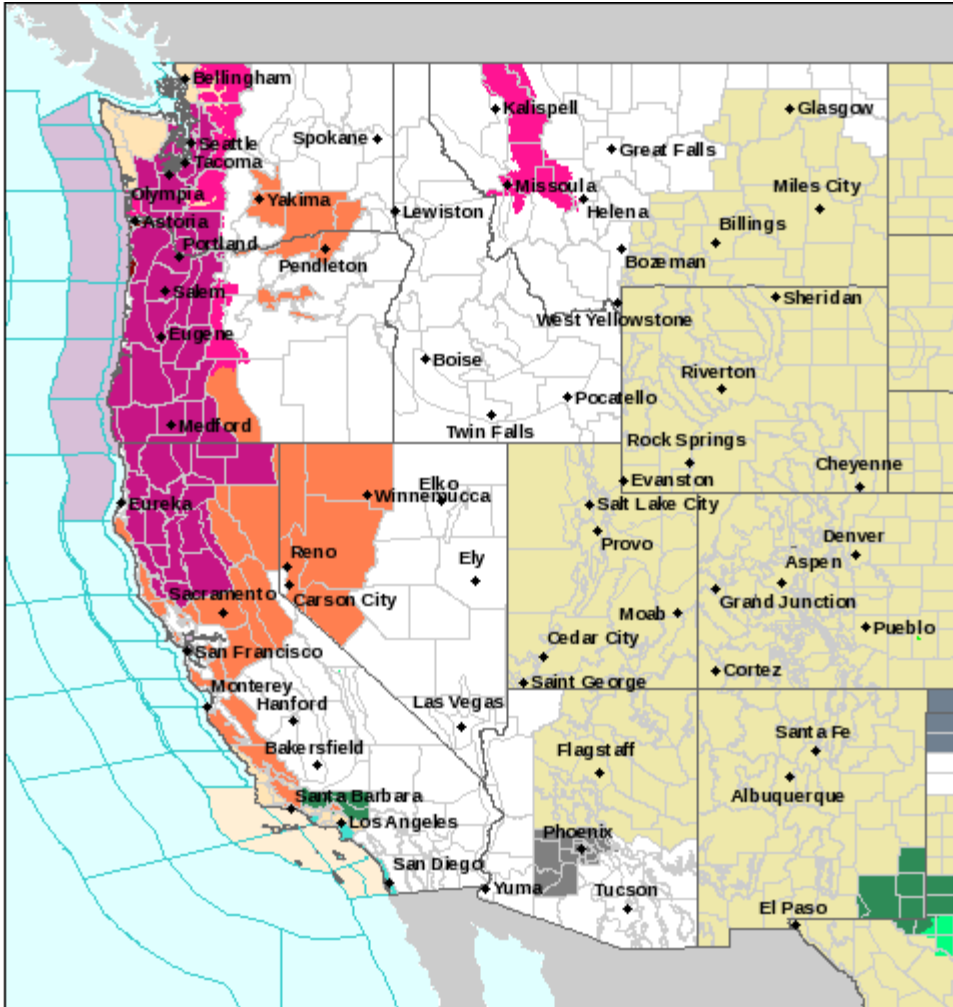

### Yellow - Low Risk
